

ABSTRACT

In the stereophonic sound field reproducing apparatus for reproducing a stereophonic sound field, at the time of using, a signal processing unit (4) executes a process on signals to reproduction-use minispeakers (6L1 through 6LN, 6R1 through 6RN) so as to simultaneously correct characteristics between the reproduction-use minispeakers (6L1 through 6LN, 6R1 through 6RN) and a head of a user (5) and characteristics between the reproduction-use minispeakers (6L1 through 6LN, 6R1 through 6RN), and the reproduction-use minispeakers (6L1 through 6LN, 6R1 through 6RN) arranged around the head of the user (5) input signals and output sound waves.
